Marine Ecology: Concepts and Applications

Martin R. Speight, Peter A. Henderson

Marine Ecology: Concepts and Applications Martin R. Speight, Peter A. Henderson

This book began life as a series of lectures given to second and third year undergraduates at Oxford University. These lectures were designed to give students insights as to how marine ecosystems functioned, how they were being affected by natural and human interventions, and how we might be able to conserve them and manage them sustainably for the good of people, both recreationally and economically. This book presents 10 chapters, beginning with principles of oceanography important to ecology, through discussions of the magnitude of marine biodiversity and the factors influencing it, the functioning of marine ecosystems at within trophic levels such as primary production, competition and dispersal, to different trophic level interactions such as herbivory, predation and parasitism. The final three chapters look at the more applied aspects of marine ecology, discussion fisheries, human impacts, and management and conservation.

Other textbooks covering similar topics tend to treat the topics from the point of view of separate ecosystems, with chapters on reefs, rocks and deep sea. This book however is topic driven as described above, and each chapter makes full use of examples from all appropriate marine ecosystems. The book is illustrated throughout with many full colour diagrams and high quality photographs.

The book is aimed at undergraduate and graduate students at colleges and universities, and it is hoped that the many examples from all over the world will provide global relevance and interest.

Both authors have long experience of research and teaching in marine ecology. Martin Speight's first degree was in marine zoology at UCNW Bangor, and he has taught marine ecology and conservation at Oxford for 25 years. His research students study tropical marine ecology from the Caribbean through East Africa to the Far East. Peter Henderson is a Senior Research Associate at the University of Oxford, and is Director of Pisces Conservation in the UK. He has worked on marine and freshwater fisheries, as well as ecological and economic impacts and exploitation of the sea in North and South America as well as Europe.

From reader reviews:

Steven Richardson:

Book is written, printed, or descriptive for everything. You can know everything you want by a book. Book has a different type. As we know that book is important thing to bring us around the world. Next to that you can your reading ability was fluently. A e-book Marine Ecology: Concepts and Applications will make you to always be smarter. You can feel considerably more confidence if you can know about almost everything. But some of you think in which open or reading the book make you bored. It isn't make you fun. Why they may be thought like that? Have you searching for best book or suitable book with you?

Adam Schneider:

Playing with family in a park, coming to see the ocean world or hanging out with good friends is thing that usually you will have done when you have spare time, and then why you don't try thing that really opposite from that. One activity that make you not experience tired but still relaxing, trilling like on roller coaster you are ride on and with addition associated with. Even you love Marine Ecology: Concepts and Applications, you are able to enjoy both. It is good combination right, you still desire to miss it? What kind of hang-out type is it? Oh come on its mind hangout folks. What? Still don't obtain it, oh come on its known as reading friends.

Mac Cutter:

Marine Ecology: Concepts and Applications can be one of your beginning books that are good idea. We recommend that straight away because this reserve has good vocabulary that could increase your knowledge in language, easy to understand, bit entertaining but still delivering the information. The copy writer giving his/her effort to put every word into satisfaction arrangement in writing Marine Ecology: Concepts and Applications yet doesn't forget the main stage, giving the reader the hottest as well as based confirm resource details that maybe you can be certainly one of it. This great information may drawn you into brand new stage of crucial considering.

Joseph Cosgrove:

In this era which is the greater man or who has ability to do something more are more valuable than other. Do you want to become considered one of it? It is just simple way to have that. What you need to do is just spending your time little but quite enough to get a look at some books. Among the books in the top checklist in your reading list is usually Marine Ecology: Concepts and Applications. This book that is qualified as The Hungry Slopes can get you closer in turning into precious person. By looking up and review this e-book you can get many advantages.
