Progress in Organic and Physical Chemistry: Structures and Mechanisms

Progress in Organic and Physical Chemistry: Structures and Mechanisms provides a collection of new research in the field of organic and physical properties, including new research on:

- The physical principles of the conductivity of electrical conducting polymer compounds
- The dependence on constants of electromagnetic interactions upon electron spacial-energy characteristics
- Effects of chitosan moleculatural weight on rehological behavior of chitosan modified nanoclay at hight hydrated state
- Bio-structural energy criteria of functional states in normal and pathological conditions
- Potentiometric study on the international between devalent cations and sodium carboxylates in aqueous solutions
- Structural characteristic changes in erythrocyte membranes of mice bearing Alzheimer's-like disease caused by the olfactory bulbetomy

This volume is intended to provide an overview of new studies and research for engineers, faculty, researchers, and upper-level students in the field of organic and physical chemistry.
