Fundamentals of Number Theory (Dover Books on Mathematics)

William J. LeVeque

Fundamentals of Number Theory (Dover Books on Mathematics) William J. LeVeque

This excellent textbook introduces the basics of number theory, incorporating the language of abstract algebra. A knowledge of such algebraic concepts as group, ring, field, and domain is not assumed, however; all terms are defined and examples are given — making the book self-contained in this respect.

The author begins with an introductory chapter on number theory and its early history. Subsequent chapters deal with unique factorization and the GCD, quadratic residues, number-theoretic functions and the distribution of primes, sums of squares, quadratic equations and quadratic fields, diophantine approximation, and more. Included are discussions of topics not always found in introductory texts: factorization and primality of large integers, p -adic numbers, algebraic number fields, Brun's theorem on twin primes, and the transcendence of e , to mention a few.

Readers will find a substantial number of well-chosen problems, along with many notes and bibliographical references selected for readability and relevance. Five helpful appendixes — containing such study aids as a factor table, computer-plotted graphs, a table of indices, the Greek alphabet, and a list of symbols — and a bibliography round out this well-written text, which is directed toward undergraduate majors and beginning graduate students in mathematics. No post-calculus prerequisite is assumed. 1977 edition.

From reader reviews:

Dan Maes:

What do you concerning book? It is not important together with you? Or just adding material when you want something to explain what you problem? How about your spare time? Or are you busy person? If you don't have spare time to accomplish others business, it is make one feel bored faster. And you have extra time? What did you do? Every person has many questions above. The doctor has to answer that question due to the fact just their can do that. It said that about e-book. Book is familiar in each person. Yes, it is suitable. Because start from on kindergarten until university need this specific Fundamentals of Number Theory (Dover Books on Mathematics) to read.

Robert Hensley:

Spent a free time for you to be fun activity to accomplish! A lot of people spent their down time with their family, or their own friends. Usually they performing activity like watching television, planning to beach, or picnic from the park. They actually doing ditto every week. Do you feel it? Will you something different to fill your own free time/ holiday? Might be reading a book is usually option to fill your no cost time/ holiday. The first thing you ask may be what kinds of guide that you should read. If you want to test look for book, may be the publication untitled Fundamentals of Number Theory (Dover Books on Mathematics) can be excellent book to read. May be it may be best activity to you.

Donna Graham:

Your reading sixth sense will not betray anyone, why because this Fundamentals of Number Theory (Dover Books on Mathematics) reserve written by well-known writer who knows well how to make book that may be understand by anyone who also read the book. Written with good manner for you, leaking every ideas and writing skill only for eliminate your own hunger then you still question Fundamentals of Number Theory (Dover Books on Mathematics) as good book not simply by the cover but also by content. This is one book that can break don't ascertain book by its cover, so do you still needing a different sixth sense to pick this!?! Oh come on your reading sixth sense already alerted you so why you have to listening to an additional sixth sense.

Francis Corder:

That guide can make you to feel relax. That book Fundamentals of Number Theory (Dover Books on Mathematics) was vibrant and of course has pictures on there. As we know that book Fundamentals of Number Theory (Dover Books on Mathematics) has many kinds or type. Start from kids until adolescents. For example Naruto or Private investigator Conan you can read and feel that you are the character on there. So , not at all of book tend to be make you bored, any it offers you feel happy, fun and loosen up. Try to choose the best book in your case and try to like reading in which.
