The thoroughly revised and updated Second Edition of this text is part of the popular **Lippincott Williams & Wilkins MRI Teaching File Series**. The book presents 100 actual case studies that cover a wide range of head and neck disorders and demonstrate the use of current MRI techniques and contrast enhancement agents to aid in diagnosis. Each case study is illustrated with high-resolution MR images and presented in an easy-to-follow format on a two-page spread. On the left-hand page are the images and the clinical history. On the right-hand page are concise descriptions of the radiographic findings, the diagnosis, and the pathology. This format is ideal for teaching readers how to interpret MR images or for everyday reference at the view box. **Praise for the previous edition:** "The book is packed with pearls....It should be useful to residents and generalists in radiology and to those in other disciplines in which MR imaging is used....This book is well worth the investment."--**American Journal of Roentgenology**
